Quarter century of comprehensive ecological solutions for waste management

Purum helps large businesses and industry, municipalities, small enterprises as well as to sole traders.

Purum offers ecological reuse, recycling, energy waste utilization and waste removal of all types of waste. We assume complete responsibility for comprehensive waste management including legislation and consulting service in ecology and waste services.

Introducing Purum.

**Purely
ecological
solution**

Our Services

Waste Collection, Salvage, and Purchase

We collect, purchase and recycle all kinds of waste.

Purum collects, purchases, transports and sorts all types of waste including hazardous waste. The waste is ecologically reused, recycled, energy utilized or removed in Purum facilities. We process all kinds of waste including hospital waste and we play a prevalent role in recycling gas cylinders and mercury.

The service includes

- Collection, purchase, transport
- Waste separation, recycling, energy and material utilization, disposal of waste
- Waste and hazardous waste storage
- Processing all kinds of waste including:
 - Recycling and processing of gas cylinders
 - Decontamination of hospital waste
 - Recycling of mercury

Our Services

Comprehensive Waste Management

Once you put waste into a bin, we assume complete responsibility for your waste management.

We assume complete responsibility for treatment of your waste management. All services connected with the logistic, transportation, recycling and administration of waste are handled by Purum staff with their professionalism and technique. You may concentrate on your core business only, we help to reduce your waste costs, increase recycling rates and eliminate thus environment risks.

The service includes

- Comprehensive service
- Arranging sorting bins and containers for all types of waste
- Optimising the logistic of waste and secondary raw materials
- Recycling, material and energy waste utilization
- Compliance with environmental laws and regulations
- Assuming of legal responsibility

Our Services

Secondary Raw Materials and Circular Economy

Waste management becomes the resource management.

We collect, purchase, and recycle secondary raw materials. Purum favors processing waste as the resource which clearly contributes to the sustainable development of life on the Earth and helps businesses to reduce their waste costs.

The service includes

- Collecting and transport secondary raw materials
- Processing secondary raw materials
- Increasing the share of recycled waste in your business
- Arranging waste collection points in your company
- Circular economy

Our Services

Water Management Services

Cleaning and camera inspections of sewer systems and wastewater treatment plants.

We provide camera inspections, revisions, and special industrial cleaning of wastewater collectors, sewer systems, storage containers, pipe lines, tanks, sumps, oil reservoirs, and gullies. The waste is processed in Purum facilities. Purum also designs and constructs plants for the complete treatment including their operation and revisions.

The service includes

- Sewer systems, wastewater treatment plants, and similar systems cleaning
- Removal of sludge from tanks and similar systems
- Mechanical cleaning
- Inspections by a TV camera
- Revisions
- Non-stop service
- Design and construction wastewater treatment plant and similar facilities

Our Services

PET Plastic Recycling

We process 1 000 000 PET bottles every day.

Purum recycles PET plastic by advanced techniques. Plastics are separated by camera sensors for a maximizing product cleanliness and crushed to the final size. The final product PET flakes of the very highest standard serve as a raw material for automotive, toy, furniture and other industries.

The service includes

- PET plastic recycling
- PET flakes production
- Production of alternative fuels
- Circular economy

Our Services

Plastic Recycling

We turn plastic into high quality materials.

Purum specializes in reuse of PP, ABS, PMMA, PC/ABS, PS, PC and other materials as well. We organize transport, storage and processing of plastic waste into a regranulate by using modern technologies. We produce high quality of regranulates which are used for production of a wide range of plastic products in manufacturing industry.

The service includes

- Plastic waste recycling and material utilization
- Plastic regranulation
- Optimization your production processes
- Circular economy

Our Services

Disposal of Liquid Hazardous Waste

Purum operates deemulsification, neutralization and solidification facilities.

Purum operates several facilities which process and dispose industrial liquid waste and wastewater including hazardous liquid waste by means of physical-chemical separation, i.e. by deemulsification neutralization and solidification methods.

The service includes

- Deemulsification
- Neutralization
- Solidification
- Processing all kinds of liquid, hazardous waste, and wastewater
- Recycling of oil filters

Our Services

Energy Recovery and Waste Incineration

Incineration and thermic disposal of waste.

For some waste, energy waste utilization is the only one option of safe disposal. For the environment protection, this is one of the safest methods used for utilization of hazardous waste. Purum operates very modern facility for the thermic disposal of waste which produce during the energy utilization an electric steam and an electric power which are used, in turn, as a source of electricity for heating.

The service includes

- Logistic hazardous liquid waste by Purum staff and technique
- Acceptance hazardous liquid waste in Purum facilities
- Energy waste utilization and incineration
- Secondary source of energy

Our Services

Transport of Waste and Chemical Substances

We transport all types of waste all over the Europe.

Purum division ADR Trans provides a full range of national and international transportation services. We offer comprehensive logistic solutions for your business. Purum brings chemical substances including hazardous ones into your plants all over the Europe and transports wastes from your production as well.

The service includes

- Logistic of transport in the Czech republic and Europe
- Transport all types of chemical substances and waste into and from your plants
- Service just-in-time
- Export permissions
- Accordance to international standards (ADR)

Our Services

Environmental Consulting Services

Purely ecological solution.

The service includes

- Consulting services in waste management, water management, and protection, handling chemical substances, ADR transport, and related fields
- Training employees
- Internal audits focused on compliance with environmental laws
- Processing of all permits and approvals for the documentation
- Notification process (import / export waste)

Purum provides consulting services to our customers who have certain obligations pursuant to environmental laws in force. We offer consultations or training courses in our educational facilities or in your plants.
